# 2023 Restoration of the Bell Tower

## Original Construction

When originally constructed over 100 years ago, the St. Dominic's Church was graced with a soaring tower topped by a beautiful octagonal "lantern." In 1989, the Loma Prieta earthquake severely damages the church, collapsing the lantern portion onto Bush Street.

## Loma Prieta Earthquake Repairs

The church is closed for two months to effect repairs. What remains of the tower is made structurally sound with interior vertical steel beam reinforcements and tubular cross-bracing between the verticals.

## The Toll of Time

Over the years, the marine atmosphere of San Francisco has taken its toll, corroding the structural reinforcement. Meanwhile, seismic construction standards have become more stringent.

## Our Tower Renewed

The parish has undertaken an extensive \$2 million renovation project to restore the tower and illuminate its facade. Join us in preserving our heritage, ensuring that future generations continue to experience the beauty and spirituality of this remarkable place.
